

The Doorhan SWK key switch is used to control motor units to open, stop or close a gate. The control is given by turning the key to one of two set positions. After releasing the key, it will return to its original position. The unit has a mechanical lock, which does not allow the removal of the cover without the correct key inserted and turned.

Type of contact	NO/NC
Number of contacts Keyswitch/SWK	1/2
Switching Current	5A
Switching Voltage	125-250V AC
Protection Class	IP54
Operating temperature	-40°C ... +50°C
